

## Destination: Komodo

Ports of embarkation/disembarkation: Labuanbajo and/or Bima or Bali (**see trip schedule for details**)

**Please note: this is a sample itinerary. Itineraries may change without further notice due to weather conditions or other unforeseen circumstances.**

Diving in Komodo offers an exciting variety of dive sites and experiences. Komodo National Park is home to the world's largest lizard, the Komodo Dragon. This area is a World Heritage Site and one of the New 7 Wonders of the World.

Komodo has it all! Beautiful soft coral reefs, exhilarating drift dives, spectacular hard coral reefs, fishy pinnacles and black sand muck dives. Komodo is home to a large population of manta rays, large schools of fish, turtles, reef sharks and a myriad of weird and wonderful fish and critters!

The large channel between the islands of Komodo and Flores has colourful reefs and exhilarating drift dives. At Karang Makassar you can drift along the bottom of the sea to look for manta rays. Tatawa Besar and Siaba Kecil have healthy reefs that are best viewed while floating along in the current. The corals and fish life at the pinnacle of Batu Bolong are beyond belief! Batu Tengah lies exactly in the middle of the National Park and the healthy hard corals here attract reef sharks and turtles.

In the north of Komodo National Park there are pinnacles full of fish where you might also see reef sharks, eagle rays and turtles. The two most famous dive sites are Crystal and Castle Rock. You might also dive at the fishy reefs of Shotgun and The Passage.

A highlight of any visit to Komodo is to see the Dragons! There are several locations where you can see these magnificent animals. Any cruise on board Coralia will include a trek to look for Komodo Dragons. There are also a couple of viewpoints where you can take in breath-taking views across the National Park.

There are plenty of macro dives too. Wainilo and Loh Liang Bay are where your dive guides will look for critters that you never thought existed! Melibe nudibranchs, hairy frogfish, flamboyant cuttlefish, ghost pipefish, harlequin shrimps are some divers' favourites. Pink Beach and Torpedo Alley are both excellent dives that can be done during the day and at night.

Padar island has a wonderful viewpoint and long, empty beaches. There are several dive sites such as Three Sisters and Secret Garden in this area. Your dive guides will look for giant frogfish here and keep your eyes out into the open water for schools of mobula rays.

In the south of Komodo are some world-renowned dive sites. Inside Horseshoe Bay on the south of Rinca Island you will see a very different coral landscape at Cannibal Rock and Yellow Wall of Texas. Crinoids and sea squirts host cute ladybugs, colourful walls are home to giant frogfish and hiding inside fire sea urchins are zebra crabs and Coleman shrimps. The Holy Grail of fish, Rhinopias, have also been found in this area. Manta Alley is on the south of Komodo island. This is another popular spot for manta rays to hang out to feed and get cleaned.

During cruises in and out of **Bima** you will also be diving in other areas. We might stop at Gili Banta, just on the outside of Komodo National Park. The main dive sites there are GPS Point, Tanduk Rusa and Gazer Beach. At Gazer Beach we do a night dive to look for stargazers, octopus and coral catsharks.

Sangeang Volcano is an active volcano where you can dive at Hot Rocks where you will find a phenomenon of bubbles coming out of the reef creating a natural jacuzzi! The black sands are home to all sorts of mystical creatures and the night dive here is not to be missed. In the south there is a small village where we can take a walk to see island life.

Bima Bay on the island of Sumbawa has some of the best muck diving in Indonesia. There is a chance to see wunderpus, mimic and blue-ringed octopus, seahorses, frogfish, bumblebee shrimps, tiger shrimps and a long list of other amazing critters.

On cruises in and out of **Bali** you will also dive at the islands of Satonda and Moyo. At Satonda there is a healthy reef where we look for nudibranchs, pygmy seahorses and cuttlefish. Either Angel Reef, Little Angel or Panjang Reef will be our last dive of the trip. These reefs all have the protection of the village on Moyo Island so they are full of fish!
